- Section B: Trade in Services	28
- Section C: Foreign Direct Investment	42
■ Part 2	
- Special Feature: Canada's Trade and Investment Linkages with Europe	59
■ Appendix	87

## Part 1: Main Messages

- Canada's exports continued to register strong performance in 2000 driven by strong economic growth in the U.S., a weak Canadian dollar and the North American trade agreements. The data to date, point to a significant slowdown in trade flows in 2001 as the U.S. economy decelerates.
- The U.S. accounts for an increasingly large share of Canadian merchandise exports. The importance of non-resource based products in Canadian merchandise continue to increase.
- Although services account for over two-thirds of our GDP, they only account for approximately 13% of trade and this share is declining. Commercial service exports however, have showed solid growth as Canada's share of world commercial services trade increases.
- Both inward and outward FDI boomed in 2000, driven by a boom in cross-border mergers & acquisitions (M&As). Canada's share of North American FDI continued to fall in 2000, dropping to 13.2%. This declining share is partly due to our declining share of U.S. direct investment abroad (DIA) and partly to the fact that the U.S. is attracting a greater share of North American-bound investment.

## Section A Canada's Trade Performance: An Overview

### Highlights

- Real exports and imports continued to grow at a rapid pace in 2000, but real imports grew at a significantly faster pace. All signs point to a significantly weaker performance in 2001.
- The current account registered a record surplus, driven by a huge surplus in merchandise trade.
- Canada's share of world merchandise exports continued to grow.
- International trade continues to outpace internal (inter-provincial) trade, driven by strong demand in the U.S. market, a depreciating dollar and increased specialization.
- Canadian exports continue to shift more towards non-resource based industries, and the U.S. share of Canada's merchandise exports continues to grow.
- The average size of the Canadian exporter is increasing.

## *In 2000, Canadian real imports outpaced exports*

- Growth of real imports of goods and services picked up significantly in 2000, reaching 12 percent, from 9.4 percent a year earlier.
- On the other hand, growth of real exports dropped slightly to 9.6 percent, from 10 percent in 1999.
  - ▶ Net real exports contributed negatively to economic growth in 2000, a reverse of the situation in 1998 and 1999.

**Annual Growth of Real Exports and Real Imports of Goods and Services**

Real Exports & Imports of Goods & Services, \$ Billion				
	1996	1998	1999	2000
Exports	275	322	354	396
Imports	251	305	334	374

# *In 2001, real exports and imports declined*

## Quarterly Growth of Real Exports and Real Imports of Goods and Services

■ Exports  
■ Imports

- Real exports and imports shrank over the first three quarters of 2001, declining by 4.4 percent and 4.7 percent respectively.
- This has largely been a result of the economic slowdown in the U.S.
- ▶ Recent events and more pessimistic forecasts for the rest of 2001 give reason to believe that the rest of the year may be more negative still.

Source: Compilations based on Statistics Canada data

## The current account surplus hit record highs in 2000...

- Driven by a booming merchandise trade surplus that reached nearly \$60 billion in 2000, the current account balance jumped to a record surplus of \$26.9 billion, an increase of \$25 billion from the small surplus registered in 1999.
  - ▶ Income from investments and transfers also increased substantially in 2000, with the deficit in that account narrowing from \$30.2 billion in 1999 to \$25.7 billion in 2000.
  - ▶ The services trade deficit remained relatively unchanged at \$6.7 billion.
- The current account surplus has seen a slight reduction of \$2.4 billion through the first three quarters of 2001.

Current Account Balance by Category

Source: Compilations based on Statistics Canada data

...as export prices rose dramatically

■ In 1999 and 2000 export prices and import prices diverged with export prices rising sharply, gaining 6 percent, while import prices fell by 4 percent.

Source: Compilations based on Statistics Canada data

## Trade made an important contribution to Canada's economic performance in the 1990s

- Between 1990 and 2000 increases in net exports directly accounted for 9.2 percent of the increase in real GDP and 8.0 percent of all net new jobs (close to 140,000 jobs) created in Canada.
  - ▶ Much of this contribution came in the first half of the 1990's. On the other hand, in the second half of the 1990's, real exports on average, grew at the same pace as real imports making no significant contribution to economic growth.
- Increases in trade also contribute indirectly to real income and job creation via increased competition, specialization, lower prices and productivity improvements.

**Contribution to  
Economic Growth  
1990-2000**

# Canada's outward orientation continued to rise...

Ratios of Real Exports and Imports to GDP  
(Percent)

Source: Compilations based on Statistics Canada data

- Canada's trade orientation (ratio of exports and imports to GDP) continued to soar in 2000 reaching 84 percent — 43 percent for exports and 41 percent for imports.
- An increase of 35 percentage points in trade orientation since 1990.
- Canada's share of G7 exports far exceeds Canada's share of G7 GDP indicating more openness than other G7 countries.

*...and does so across all provinces...*

- The rapid surge in export orientation and import penetration in the 1990s was pervasive across all Canadian provinces.
  - ▶ Ontario remains, by a considerable margin, the most outward-oriented province — both imports and exports.
  - ▶ The Atlantic provinces experienced the most rapid growth in trade orientation in the 1990s, driven by strong growth in exports.
  - ▶ B.C. had the weakest trade performance in the 1990s and by 1999 had the lowest trade orientation of any Canadian region.
  - This is a result of the still lingering effects of the Asian crisis on B.C.'s imports and low commodity prices in general.

Ratio of Real Exports to GDP

Ratio of Real Imports to GDP

Source: Compilations based on Statistics Canada data

# ...and for nearly all manufacturing industries

## Manufacturing Exports as a Percentage of Shipments

■ Nearly every industry experienced an increase in export orientation over the 1990s.

► Only Primary Metals and Refined Petroleum saw a decrease in export orientation, likely a result of low commodity prices and weak performance of the Asian economies in the later part of the 1990s.

► Half of Canadian manufacturing industries export more than 50 percent of their output.

■ Furniture & Fixtures and Clothing & Textiles, experienced the greatest increase in export orientation over the 1990s, driven by rapid transformation towards increased cost competitiveness and improved productivity after the implementation of the FTA as well as the strong U.S. economy.

Source: Compilations based on Statistics Canada data

*Canada's share of global exports increased significantly in recent years...*

- Canada's share of G7 exports has increased by 1.7 percentage points since 1990, reaching 9.2 percent in 2000.
- Canada's share of world exports increased from 3.9 percent in 1995 to 4.3 percent in 2000.

Source: Compilations based on data from the World Trade Organization.

...as Canada became the 6th largest global exporter

# World's 10 Largest Merchandise Exporters 1995 and 2000

Average Annual Growth in Exports 1995-2000

- Canada is now the 6th largest exporter in the world having overtaken the Netherlands in 1996 and Italy in 2000.
- Furthermore, Canada's average annual growth rate of exports of 7.6 percent far exceeds all the 10 largest exporters, except China.

Source: World Trade Organization

## North-South trade linkages continue to expand faster than East-West linkages...

- International trade is now more than twice as large as internal trade and continues to expand at a more rapid pace than internal trade.
  - ▶ The ratio of international trade to interprovincial trade steadily increased from 120 percent in 1990 to 212 percent in 1999.
- Stronger trade linkages with the U.S. for every province have been driving this trend.

International Trade as a Percentage of Interprovincial Trade

Interprovincial & International Trade, \$ Billion			
	1989	1995	1999
Interprovincial	298	299	353
International	341	541	751

Source: Compilations based on Statistics Canada data

...as the importance of the U.S. market for exports continued to rise in 2000...

- Over the past decade, the U.S. share of Canadian merchandise exports has increased by more than 12 percentage points from less than 75 percent in 1990 to more than 87 percent in 2000.
- The share of all other destinations fell over the same period, especially Japan, which has yet to fully recover from its economic difficulties.

Canada's Total Merchandise Exports, \$ Billion		
1990	1995	2000
152	265	412

Source: Compilations based on Statistics Canada data

*...driven by strong U.S. demand...*

- There has been a very strong correlation between the growth rate of total U.S. merchandise imports and Canadian merchandise exports to the U.S. over the nineties.
  - ▶ In 2000, growth in Canada's exports to the U.S. fell somewhat short of total U.S. import growth resulting in a slight decline in our share of U.S. imports.
  - ▶ The slowdown in the U.S. economy is forecast to continue, at least until the middle of next year. This does not bode well for the performance of Canadian exports, as well as the Canadian economy.

Growth Rate of U.S. Merchandise Imports and Canadian Merchandise Exports to U.S.

## ...and the declining dollar

- In the 1990s, Canada's unit labour costs (in U.S. dollar terms) declined by 14.8 percent compared to a 3.8 percent reduction in the U.S.
- The depreciation of the Canadian dollar was entirely responsible for Canada's improved cost position in the 1990's.
- ▶ Between 1990 and 2000, the Canadian dollar depreciated by 22.2 percent.
- ▶ The lower rate of growth in Canada's hourly compensation in manufacturing was more than offset by our relatively poor productivity performance.

■ Canada's recent export expansion and improved trade performance will not be sustainable in the longer run, without a substantial improvement in our relative productivity performance.

Cumulative Change in the Components of Unit Labour Costs (ULC) in Manufacturing: Canada and the U.S., 1990-2000 (Percent)

\*ULC growth in U.S. dollars  
Source: Compilations based on data from U.S. Bureau of Labor Statistics

*Despite the merchandise export boom, Canada's share of U.S. imports remained relatively stable in the 1990s...*

- Canada's share of U.S. imports, like the E.U., has been relatively stable over the 1990s.
- Over the same period, the shares of Mexico and China have increased dramatically.
  - ▶ Mexico's share of U.S. imports increased from 6 percent in 1990 to more than 11 percent in 2000.
  - ▶ China's share increased by a similar amount, rising from 3 percent to 8 percent.
- Japan's share dropped from 18 percent in 1990 to 12 percent in 2000.

Distribution of U.S. Imports

Source: Compilations based on U.S. ITC data

...and there has been a slight decline in the share of exporters focusing only on the U.S.

- Despite the large increase in exports going to the U.S., there has been a slight fall in the portion of establishments exporting only to the U.S.
- ▶ In 1993, 66.5 percent of establishments exported only to the U.S. and this percentage had declined slightly to 65.7 by 1999. The share of establishments exporting only to non-U.S. destinations increased from 11.3 to 12.1 percent.
- ▶ The total number of exporters to all destinations, however, has increased significantly from 23 thousand in 1993 to 29 thousand in 1999.
- ▶ This suggests that exporters may first venture into the U.S. market before diversifying to other destinations.

## *Intra-firm trade accounts for a large but declining share of total Canada-U.S. trade*

- The share of intra-firm trade in total Canada-U.S. trade has declined substantially.
  - ▶ Intra-firm share of exports declined from 47 percent in 1983 to 40 percent in 1998 while for imports it dropped from 51 percent to 36 percent.
  - ▶ The two free trade agreements, FTA and NAFTA, might have facilitated trade expansion among firms within a given industry.

1998

# The U.S.'s share of our imports declined sharply in 2000

Geographic Distribution of Canada's Merchandise Imports

- U.S.'s share of Canada's total merchandise imports dropped sharply in 2000, from 67 percent to 64 percent, compared to a recent peak of 68 percent in 1998.
- Imports from Mexico, China and other East-Asian economies rose sharply in 2000.

Canada's Total Merchandise Imports, \$ Billion			
1990	141	1995	230
2000	356		

Source: Compilations based on Statistics Canada data

## Non-resource based exports have increased steadily...

- The share of Non-resource-based Manufacturing products (including autos) has increased by 7 percentage points in the 1990s, now standing at 55 percent of total merchandise exports.
  - ▶ This was led, in large part, by a boom in the exports of electrical and electronics products.
  - ▶ The share of Automotives remained at 24 percent through the period.
- On the other hand, shares of Primary Products declined by half to 5 percent. The share of Resource-based Manufactured Products declined by 2 percentage points from 42 percent to 40 percent.

Distribution of Canada's  
Merchandise Exports by Industry  
(Percent)

Canada's Total Merchandise Exports, \$ Billion		
1990	1995	2000
141	248	382

...as well as for imports

- Similarly, the share of Non-Resource based imports (including autos) increased over the 1990s, largely at the expense of Primary and Resource-based exports.

Distribution of Canada's Merchandise Imports by Industry

	131	217	347

Source: Compilations based on Statistics Canada data

## Canada's competitive advantage in resources and resource-based products deepened in the 1990's

- Resource-based manufacturers, Automotives, and Primary goods registered growing surpluses in the 1990's.
- Our deficit in Non-resource-based manufactured products increased from \$30 billion in 1990 to \$70 billion in 2000, partly offsetting the large surpluses in other products.
- The trends in trade balances may reflect the deepening of our comparative advantage position.

Source: Compilations based on Statistics Canada data

Industry Canada Industrie Canada

## A few large exporters account for the majority of Canada's exports

Number of Exporters by Size of Exporter, 1999

Value of Exports by Size of Exporter, 1999  
(Share)

- Exporters that export more than \$25 million annually account for only 3.9 percent of total exporters in Canada but account for 83 percent of the value of exports.

- In fact, the 50 largest exporters account for 46 percent of Canada's total exports.

- Exporters that export less than \$1 million annually make up over 70 percent of the exporter population in Canada while accounting for only 1.5 percent of exports.

## The average size of an exporter is increasing

- In every industry, with the exception of Refined Petroleum, the average exporter size in Canada increased.
  - ▶ This reflects the fact that the total number of exporters increased at a significantly slower pace than total Canadian exports.
  - ▶ The average value of exports per exporter was \$11.1 million in 1999 compared to \$7.6 million in 1993.
- The Transportation industry has by far the largest average exports per exporter, a reflection of the dominance of the big three auto manufacturers.

Average Size of Exporters

Source: Compilations based on Statistics Canada data

Industry Canada Industrie Canada

## Section B Trade in Services

### Highlights

- Services trade more than doubled in the 1990's, but, their relative importance in Canada's total trade continued to decline.
- In contrast to this trend, the importance of commercial services rose considerably and Canada managed to increase its share of world trade in commercial services.
- Canada's travel deficit shrunk considerably as the low dollar encouraged American spending in Canada while moderating Canada's travel spending abroad.

*In the 1990s, Canada's services trade more than doubled, but its share of in total trade declined sharply*

- Trade in services more than doubled in the 1990s, from \$55 billion in 1990 to \$117 billion in 2000. However, as a result of an even faster growth in merchandise trade over the same period, the share of services in total trade declined sharply.

- ▶ Service exports grew 150 percent between 1990 and 2000 but saw its share of total exports fall from 15.8 percent in 1990 to 13.2 percent in 2000.
- ▶ Service imports, on the other hand, grew 90 percent over the 1990s and saw its share of total imports fall from 18.9 percent to 14.5.

- The deficit in services trade fell from a peak of \$13.6 billion in 1993 to slightly less than \$7 billion in 2000.

Share of Services in Total Trade

Exports & Imports in Services, \$ Billion

Imports	33	49	62

Source: Compilations based on Statistics Canada data

# The U.S. continues to be the dominant destination for Canadian service exports...

- As with merchandise trade, the U.S. is the dominant destination for Canada's services exports.

► The U.S. accounts for 60 percent of Canada's services exports, compared to more than 85 percent for merchandise trade.

► The U.S.'s share of services trade remained stable at just over 55 percent.

- One-fifth of Canada's services exports are bound for EU and Japan. The rest of services exports go to other countries, mostly in Asia Pacific and Latin America.

Canada's Total Services Exports \$ Billion			
1990	1995	2000	
22	36	55	

Source: Compilations based on Statistics Canada data

*...as well as imports*

- There has been little change in the geographic distribution of Canada's service imports over the past decade.
- The U.S. accounts for a somewhat larger share of Canada's service imports than it does of exports at 62 percent.

# Canada's share of World commercial service exports increased...

## Leading Exporters Share in World Trade in Commercial Services

Percent

■ 2000 □ 1995

Source: World Trade Organization

- The U.S. is by far the largest exporter of Commercial Services, and its share is increasing.

- Canada is a relatively small exporter of Commercial Services, ranking 12th in 2000.

- ▶ However, Canada's share of Commercial Service exports increased from 2.1 percent in 1995 to 2.6 percent in 2000.

*...as did its share of global commercial service imports*

- In 2000, Canada ranked the 8th largest importer of Commercial Services in the world - representing 2.8 percent of the world's total Commercial Service imports.
- The growing two-way trade flows in Commercial Services in Canada and other OECD countries once again demonstrates the growing importance of specialization.

**Leading Importers in World Trade in  
Commercial Services  
1995 and 2000**

Source: World Trade Organization

*Although, commercial services share of total world trade declined in the second half of the 1990's*

World Services Trade\* as a Share of  
Total World Trade

\* Commercial services only  
Source: Compilations based on data from the WTO.

- The share of commercial services trade in total world trade declined from 18.9 percent in 1995 to 18.2 percent in 2000.
- Commercial services is one of four service categories recognized by Statistics Canada and includes professional services such as financial, insurance and legal services. It represents about half of Canada's total trade in services.

# Financial and management and business services dominate Canada's commercial services trade...

- R&D Royalties & Fees is the fastest growing category of Commercial Services receipts and payments.

► Rapid growth in foreign direct investment flows is likely an important driver of this type of "trade".

- Financial Services and Management and Business Services that account for the largest share of Canada's Commercial Services trade.

## Commercial Services Receipts (Exports)

## Commercial Services Payments (Imports)

*...but we also have deficits in these two industries*

## Commercial Services Trade Balance

- Canada runs a deficit in four of six commercial service industries. We enjoy a surplus in Engineering & Construction and Tele-Computers.
- The structure of balances in Canada's commercial services trade remained relatively stable in the second half of the 1990s.

## *Canada's travel deficit narrowed considerably over the 1990s*

- Canada's travel deficit declined from a peak of \$6.4 billion in 1992 to \$2.1 billion in 2000.
- Travel spending by Canadians abroad grew at an average annual rate of 3.5 percent over the 1990s, but was significantly outpaced by the 7.9 percent average annual increase in travel spending by foreigners in Canada.
  - The strong economic growth in the U.S. and the weak dollar likely contributed to increased spending by foreigners. The weak Canadian dollar was mainly responsible for the slower growth in Canadian's travel abroad.

Source: Compilations based on Statistics Canada data

# *U.S. travel spending in Canada has increased significantly...*

Geographical Distribution of Foreign Spending on Travel in Canada

■ Since 1995 U.S.'s share of travel spending in Canada increased by 5 percentage points, primarily at the expense of the E.U. and Japan. This could reflect stronger economic growth in the U.S., and the depreciation of our currency vis-a-vis the American dollar.

Canada's Total Travel Receipts		
	\$ Billion	
1990	7.4	
1995	10.8	
2000	15.9	

Source: Compilations based on Statistics Canada data

*...while the U.S. accounted for less Canadian travel dollars*

- Although 63 percent of Canadian tourism dollars were spent in the U.S. in 2000, this is down from 69 percent in 1990, likely due to the appreciation of the U.S. dollar over this period.
- On the other hand, the relatively stronger performance of the Canadian dollar vis-a-vis other currencies, such as the Euro, and others seems to have increased travel spending by Canadians to these areas.

### Geographical Distribution of Canada's Travel Spending Abroad

## Section C Foreign Direct Investment

### Highlights

- Canada's inward and outward foreign direct investment flows continue to increase at a rapid pace, driven mainly by a boom in mergers and acquisitions (M&A).
- Inward and outward investment are increasingly going towards high-tech industries such as electronics and telecommunications.
- Canada's outward direct investment is increasingly going to non-U.S. destinations.
- Foreign direct investment makes an important contribution to the Canadian economy.
- Canada's share of North American FDI stock continues to fall.
- In terms of both stocks and flows, Canada is receiving a declining share of U.S. investment abroad while the U.S. is gaining a larger share of investment coming into North America.

## *FDI flows reached record levels in 2000...*

- Foreign direct investment (FDI) inflows hit a record high of \$93.2 billion in 2000 - a stunning 66 percent increase over 1999 levels.
- FDI outflows also reached an all-time high of \$62 billion in 2000, a 135 percent increase over 1999 levels.
  - FDI inflows exceeded outflows in the last two years, a reversal of the trend in the previous six years.
- This dramatic increase in FDI flows over the past few years is a result of increased globalization and cyclical trends in mergers and acquisitions (M&As).

Source: Industry Canada compilations based on Statistics Canada data

*...largely in the form of cross-border capital flows...*

Share of Cross-border FDI Flows  
and Reinvested Earnings in Total  
Net FDI Inflows to Canada

Source: Compilations based on Statistics Canada data

- Reinvested earnings accounted for only 21 percent of FDI flows since 1992, compared to double that in the 1983-1991 period.
- ▶ New business opportunities in Canada following the FTA could explain much of the increase in externally financed FDI in the 1990s.
- ▶ M&As are rarely financed through reinvested earnings.

*...with a large surge in M&A activity*

- A boom in mergers and acquisitions (M&As) was the driving force behind the increase in FDI flows.
- M&As accounted for 94 percent of FDI inflows and 81 percent of FDI outflows in 2000. This is a significant increase from previous years; M&As, on average, accounted for only 50 percent of FDI inflows and 35 percent of outflows between 1990 and 1999.

**Inward FDI Flows and Foreign Acquisitions in Canada**

**Canada's Outward FDI\* Flows and Acquisitions Abroad**

Source: Compilations based on Statistics Canada data

Industry Canada Industrie Canada

*As a result of large increases in flows, foreign direct investment stocks rose significantly*

- The boom in FDI flows pushed stocks sharply higher.

► The stock of FDI in Canada rose 18 percent in 2000 to reach \$291 billion, similarly, the stock of Canadian FDI abroad increased 11 percent to reach \$301 billion.

► The gap between the outward and inward stocks reached a peak of \$34 billion in 1998, but has since been narrowing and now stands at \$10 billion.

Foreign Direct Investment Stock

## Canada's foreign investment orientation continued to rise faster than other G7 countries

- In 1999, the ratio of total FDI stock (inward plus outward) to GDP in Canada reached over 54 percent, compared to about 34 percent in 1990.
  - ▶ The average for other G7 countries is 29 percent in 1999 and 15 percent in 1990.
- The foreign investment orientation gap between Canada and other G7 countries widened significantly in the 1990's.

Share of Inward and Outward FDI Stock /GDP  
Canada and the G7

Industry Canada Industrie Canada

Source: Compilations based on data from Statistics Canada and *World Investment Report*, United Nations

# *The importance of Europe to Canada's inward FDI increased considerably in 2000...*

Geographic Distribution of the Inward FDI Stock in Canada

- Europe's share of FDI stock in Canada increased to 27 percent in 2000, up from 21 percent in 1995.
- This was, for the most part, driven by a few large acquisitions in Canada.
- The shares of U.S., U.K. and others declined.

Source: Compilations based on Statistics Canada data

*...and is increasingly concentrated in non-traditional industries*

- The share of inward FDI in "Other Industries", which includes many "new economy" industries such as electronics, communications and chemicals, has increased steadily over the 1990s.
  - This has largely occurred at the expense of the Resource industry in the first half of the 1990s and of Services & Retailing in the second half.

**Industry Distribution of  
Inward FDI Stock**

\* Includes Food, beverages and tobacco, Chemicals, chemical products and textiles, Electrical and electronic products, Construction and related activities, and Communications

Source: Compilations based on Statistics Canada data

## Canada's outward FDI stock continued to diversify geographically...

CDIA Stock	1990	1995	2000
\$ Billion	98	161	301

Source: Compilations based on Statistics Canada data

- The U.S. is still the dominant destination for Canadian investment abroad, but its importance has dwindled steadily in the last decade — the U.S. accounts for just over half of Canadian FDI abroad.
- Europe's share of Canada's outward investment is about one-fifth, and has not changed significantly in the 1990s.
- ▶ The U.K. however, which alone accounted for about 14 percent of CDIA in 1990 now accounts for only 8 percent.
- The share of Pacific Rim and Other countries in Canada's FDI abroad has increased from 18 percent in 1990 to 30 percent in 2000.
- ▶ Most of the investment went to three small Caribbean countries; Bermuda, Barbados and Bahamas.

*...and located increasingly in finance and insurance*

- Between 1990 and 2000, the share of Finance & Insurance in total Canadian FDI abroad increased from 29 percent to 34 percent.
- The share of Services & Retailing also increased somewhat in the first half of the 1990s, but has since remained stable.
- Unlike for inward FDI, the share of "Other Industries" has fallen off considerably, losing 8 percentage points since 1990s.

## Canada's share of North American inward FDI stock has declined steadily over the past three decades...

- Canada's share of North American FDI inflows declined dramatically in the late 1970's and early 1980's and has remained low ever since.
- These trends in inflows contributed to the declining share of North American inward FDI stock.
  - ▶ In 1974, Canada had 57 percent of North America's inward FDI stock, far exceeding our share of North American GDP.
  - ▶ By 1998, our share had fallen off to 13 percent, still well above our share of GDP.
- As long as Canada's share of North American FDI inflows remains below our share of North American FDI stock, Canada's share will continue to fall.

Canada's Share of North American FDI

...partially a result of reduced flows from the U.S...

Canada's Share of U.S. Outward FDI

Note: Stocks are for end period, flows are average of period.  
Source: Industry Canada compilations based on data from the U.S. BEA

- Our share of U.S. outward FDI, both stock and flows have been declining steadily for nearly three decades
- ▶ It is only recently that our share of flows have rebounded somewhat.
- The U.S. is our most important source of foreign direct investment, accounting for nearly two-thirds of our inward FDI stock.

*...and also because the U.S. is getting more from outside of North America*

- Prior to 1975, the U.S. had a disproportionately small share of North American FDI relative to its share of North American GDP.
- Since the late 1970's, more and more of the North American inbound FDI headed to the U.S.

## Part II Canada's Trade and Investment Relations with Europe

## Part 2

# Canada's Trade and Investment Relations with Europe

### Highlights

- Canada's export growth to Europe has lagged growth to other destinations, most notably the United States. Europe has become less important as a destination for Canadian exports.
- The importance of Europe as a source for imports has also declined somewhat over the 1990s, but not nearly to the same extent as exports, resulting a large and growing merchandise trade deficit.
- The four large countries of Western Europe account for the majority of Canada's trade with Europe, although some of the smaller countries are seeing a faster rate of growth.
- Canada's export to Europe are slowly shifting towards more non-resource based industries. Imports are already dominated by high-tech industries.
- The importance of the E.U. in Canada inward FDI had been falling steadily throughout the 1990s but rebounded in 2000 as a result of some mega-mergers.

## Europe is a large and diverse market

- The advanced countries of Western Europe (members of either the E.U. or EFTA) and the developing countries of Eastern Europe, many of which covet membership in the E.U., are very diverse in terms of population size, economic development, culture, language and social progress

► Even within the E.U. there are vast differences between countries, in terms of living standards, population size and economic growth.

- In 1998, E.U.'s GDP stood over U.S.\$8 trillion, the second largest market in the World, after North America.

### Europe

## Canada's trade with Europe nearly doubled...

- Canada's trade with Europe has nearly doubled to a record \$66 billion in 2000 since 1990.

- ▶ This has been largely due to the strong growth in imports from Europe which increased at an average annual rate of 8.7 percent since 1990.
- ▶ On the other hand, exports to Europe have been growing at a much slower pace of only 3.8 percent.
- ▶ Relatively strong economic growth in Canada and a stronger Canadian dollar relative to the European countries were mainly responsible for a healthy growth in imports.

- Canada's merchandise trade deficit with Europe has increased dramatically and now stands at more than \$23 billion.

- Canada's imports from Europe are now more than double the value of our exports to Europe.

Canada's Merchandise Trade with Europe  
\$ Billions

...but, has fallen considerably as a share of Canada's total trade

# European Share of Canada's Merchandise Trade

- Only slightly more than 5 percent of Canada's exports go to Europe - less than half the share in 1990.
- Since 1993, the European share of Canadian imports has remained around 12 percent after declining significantly in the early 1990s.

## Nearly all of Canada's European trade is with Western Europe

- Almost all of Canada's European trade is with Western Europe; 96.4 percent for exports and 95.8 percent for imports in 2000.
- Canada's exports to Eastern Europe declined over the 1990's, the decline occurred in 1992 and 1993 as the U.S.S.R. desintegrated and the former communist countries struggled.
- But, imports from Eastern Europe increased at a more rapid pace than from Western Europe, rising at an average annual rate of 12.7 percent.

### Distribution of European Trade with Canada, 2000

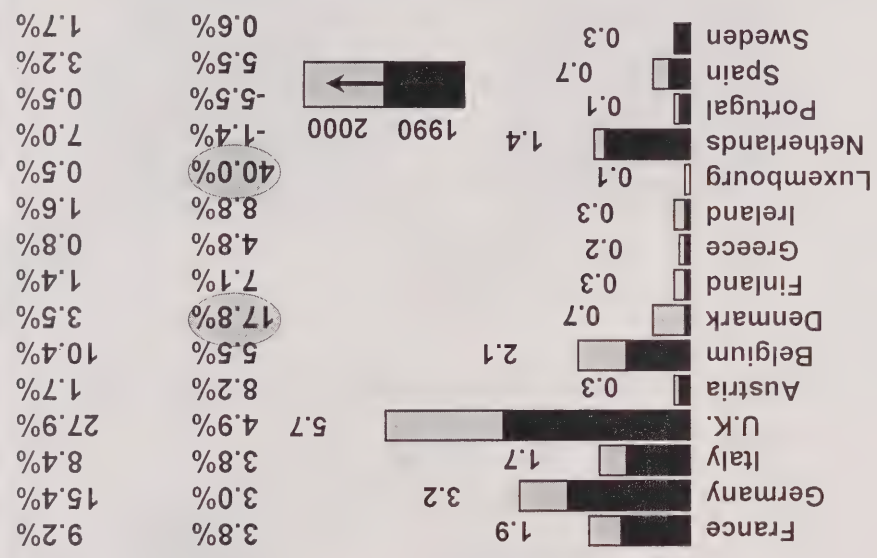

### Growth of European Trade with Canada, 1990-2000

# European G-7 members account for over 60 percent of our exports to Western Europe...

- The U.K. alone, accounts for more than one-quarter of Canadian exports to Western Europe, with the other three European G-7 countries accounting for another third.
- Canadian exports to Belgium and the Netherlands are likely somewhat overstated as these are port countries and not the final destination for the goods.
- Only Luxembourg and Denmark posted double-digit growth and, for Luxembourg, from a very small base.

# Canadian export growth to U.K. is heavily concentrated in two sectors

## Merchandise Exports to U.K.

■ Machinery & Electrical and Transportation Equipment industries represent over half of Canada's total exports to the U.K.

► Much of Canada's export growth to the U.K. also came from these two industries.

■ On the other hand, growth in resource-based industries such as Forest, Wood & Paper and Metals actually declined over the same period.

*The same two industries also drove much of the import growth from the U.K.*

### Merchandise Imports from U.K.

■ Growth in Canadian imports from the U.K. was largely driven by Machinery & Electronics, Transportation Equipment and Chemicals. Unlike exports, however, Mining & Oil imports also grew at a rapid pace and accounted for over one-third of imports from the U.K. in 2000.

► These four industries alone, accounted for over 85 percent of total Canadian imports from the U.K. in 2000.

► The U.K. accounted for about half of Canada's Oil imports from Western Europe.

# France is now our most important source of FDI from the E.U.

## Canada's Distribution of Inward FDI Stock from E.U.

1990

■ Over the 1990s, there was a dramatic shift in investment from the E.U. in Canada, away from traditional sources such as the U.K. and Germany towards France and the Netherlands.

► France's share almost tripled between 1990 and 1997, reaching 36.2 percent. On the other hand, U.K.'s share fell from 51.3 percent to 24.2 percent.

■ There was also an increase in foreign investment in Canada from the small E.U. countries such as Norway, Belgium and Sweden.

1997
